THE PROBLEM

Visitors are curious in the moment — but the guide experience is rigid.

01

You don't know what to notice first

Wall labels are dense and easy to skip.

02

Audio guides can't answer back

Fixed tracks, no follow-up questions, a device to rent.

03

Generic AI isn't grounded

It can describe a photo, but not this exhibition — in your language.

And once you leave the gallery, most of what you learned is gone.

HOW IT WORKS

Your own phone becomes the guide.

1

Enter your number

Open the app, preloaded for the show.

2

Take a photo

Snap the work in front of you.

3

Your phone rings

A multilingual AI guide calls you.

4

Ask anything

"What should I notice first?"
"Explain in Mandarin."

5

Visit Card updates

A live artifact of everything you explored.
